Skills

Languages: JavaScript, TypeScript, Go, Python, Rust

Frontend: React, Next.js, Vue.js, Nuxt.js, React Native, Three.js, GSAP, Tailwind CSS, Material UI, SCSS

Backend: Node.js, Express.js, Go Fiber, NestJS, Fastify, FastAPI

Databases: PostgreSQL, Redis, MongoDB, DynamoDB

Cloud & DevOps: Docker, Kubernetes, AWS (EC2, S3, Lambda)

Tools & Other: WebAssembly with Rust, REST APIs, Monorepo Architecture, Git, Figma, Blender, Framer

Summary

Software Engineer with **1.4 years of experience** building high-performance, scalable web applications. Strong background in **React, Next.js, and TypeScript**, with hands-on experience optimizing large, data-intensive UIs and designing secure backend services. Proven ability to architect reliable data flows, improve performance at scale, and deliver production-ready solutions using **Node.js, AWS, DynamoDB, and PostgreSQL**. Passionate about clean engineering, system design, and building maintainable, user-centric products.

Work Experience

Software Engineer

Oct 2024 - Present

Mako it lab, Chennai

- Delivered **10+ production-ready applications**, improving workflow automation and cross-team feature delivery.
- Optimized complex editable tables (**1,000+ rows, 15+ columns**) using event delegation and virtualization, reducing DOM events by **~90%** and improving UI performance by **60–70%**.
- Built large-scale dashboards and reports handling **6,000+ records**, ensuring fast rendering, pagination, filtering, and consistent UX.
- Designed and implemented **secure middleware APIs** using **AWS Lambda, API Gateway, and DynamoDB** with strict authorization and auditability.
- Implemented CSV export pipelines and reporting APIs, guaranteeing identical and consistent data across UI and exports.
- Architected scalable caching strategies (on-demand, scheduled refresh, backend cache) balancing performance, cost, and data freshness.
- Managed complex client-side state using **Zustand and React Query**, reducing unnecessary re-renders and improving interaction smoothness by **~50%**.

Project Work

AI RFP Management System

- Built an AI-powered system to generate structured RFPs from natural-language inputs, reducing manual RFP creation effort.
- Implemented vendor management and automated proposal ingestion, parsing responses into comparable structured data.
- Developed AI-assisted evaluation and scoring to compare multiple proposals and recommend best-fit vendors.
- Designed scalable workflows and clean APIs integrating AI logic with a user-friendly frontend for end-to-end RFP management.

Education

KMG COLLEGE OF ARTS & SCIENCE
B COM - COMPUTER APPLICATION

2020 – 2023
CGPA - 7.4
